

 **FagorKonnnect**
Laundry

Your laundry in
good hands.

— OPL

FagorKonnnect, the IoT from Fagor Professional

Free web platform for laundry management that takes **IoT** to its full potential, transforming the operation of your laundry.

Thanks to this web platform, you can **increase efficiency, reduce costs and improve your customers' experience remotely.**

The **Fagor Professional** machines have been developed using the **latest technology.**

Features

Accessible

Manage from any device: computer, mobile phone, tablet, etc.

Multi-language

Multiple languages available.

Useful for everyone

Owners/end users, technical support, distributors and chemical technicians.

Highly secure

Advanced security to protect data integrity and confidentiality.

Free updates

New features added regularly to keep your business at the forefront.

Constantly evolving

A great team dedicated exclusively to developing and evolving the platform.

Anytime, anywhere and from any device

The Internet of Things (IoT) is the **digital interconnection of everyday objects with the Internet**.

To manage a business well, information is fundamental and, in a globalised world, being able to consult information remotely **facilitates management and optimises time**.

In a world in constant motion, being connected allows us to be more efficient, move more easily and comfortably and, above all, have control of our businesses at our fingertips.

Advantages

Reduce unnecessary travel

Owners, technicians and chemical technicians can manage and monitor each machine and process remotely, saving time and resources.

Manage your business

Manage machines, programmes and users with access from anywhere, with total flexibility.

Stay informed about consumption

Check consumption, performance and key metrics in real time. Generate customised reports.

Unified and centralised information

All operational, consumption and efficiency data are integrated in one place, making it easier to manage your business.

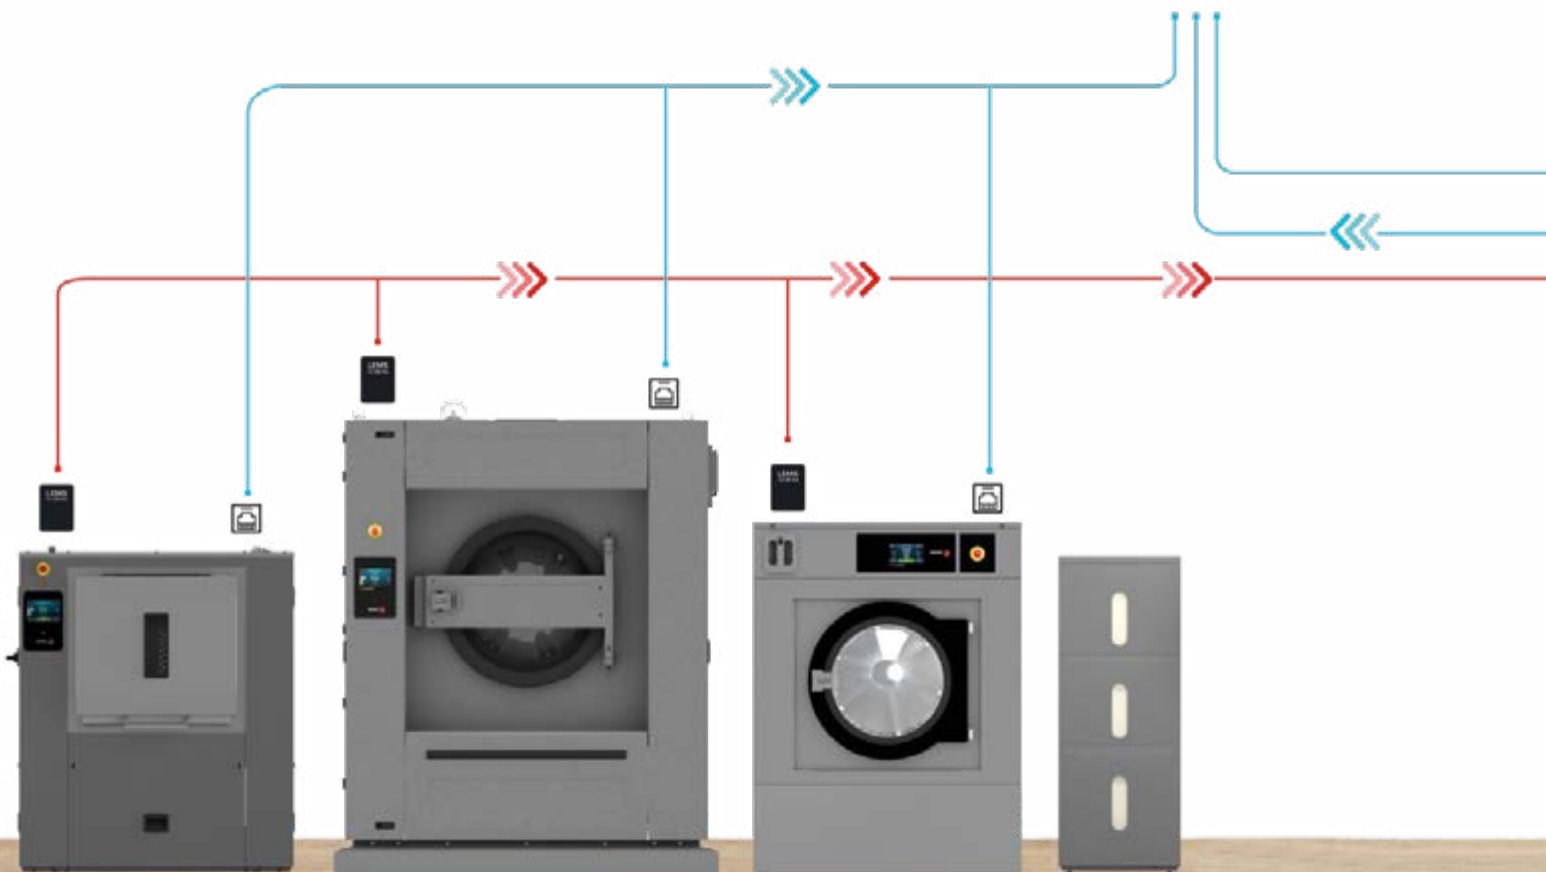

FagorKonnnect, for a sustainable laundry

At **Fagor Professional**, we know how important efficiency is and we are very aware of our commitment to the environment. That is why we develop our products with the latest technology, seeking low consumption and energy savings throughout their life cycle.

Through data transmission via the **IoT** and its integration with the **FagorKonnnect** platform, all the components in your laundry are connected, collecting accurate information in real time and allowing the complete control of processes.

 **FagorKonnnect**
Laundry

Complete control

Real-time monitoring.

Facilitates the detection of consumption patterns and possible anomalies, guaranteeing the hygiene required by standards such as RABC.

Resource optimisation.

Helps identify areas where energy and resource efficiency can be improved.

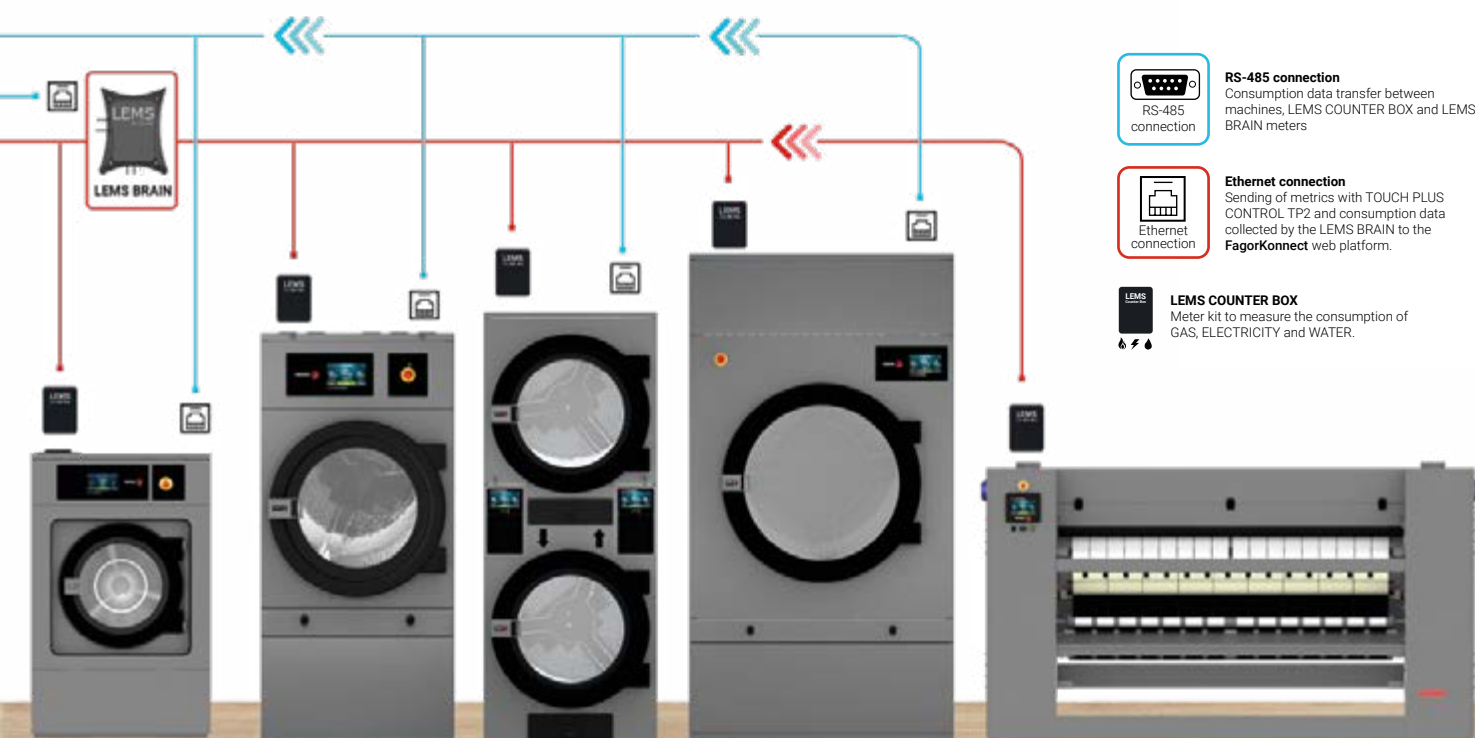

Simplified management.

Centralises consumption information, facilitating informed decision-making.

Key factors...

for a more efficient and sustainable laundry:

1. **Efficient machines and solutions.**
2. **LEMS by Onnera. Capture of data and consumption information.****
3. **FagorKonnnect. Remote control and management.**

1. Efficient machines and solutions

Our efficient equipment with Touch Plus Control TP2 has standard and free **IoT** connectivity, allowing us to fully optimise and control resources, together with our advanced LEMS by Onnera technology.

Efficient washers and solutions

Water savings of between 40 and 70% per cycle with our efficient washers, together with solutions such as the **sensor-based weighing system in the feet** and the **1,000-litre WREC water recovery tanks**.

** Depending on the types of programmes, laundry and processes.*

Efficient dryers

Reduced energy consumption and drying times in dryers with innovative systems such as the Green Flow System, which recirculates hot air, and the smart humidity sensor.

2. LEMS by Onnera

Innovative pulse concentrator that receives and transmits pulses generated by the water, gas and electricity **meters, "LEMS Counter Box"**. **
All data is transmitted via the Internet to the **FagorKconnect IoT**.

- ✓ Measure water, gas and electricity consumption in real time.
- ✓ Transmit the data automatically and securely to **FagorKconnect**.**
- ✓ Connect up to 31 machines via the LEMS Counter Box.

3. **FagorKconnect** Laundry

Remote control and management

To manage a business well, information is fundamental and, in a globalised world, being able to consult information remotely facilitates management and optimises time. **FagorKconnect**, through the cloud, allows you to optimise your time, as well as better analyse and manage your business remotely.

**These data may not be 100% reliable in certain cases due to technical reasons beyond ONNERA GROUP's control. Therefore, ONNERA GROUP cannot be held responsible for any claims or economic losses arising from their use. They are provided solely for informational and management purposes not for legal use.

FagorKonnnect adapts to each user's needs

END USER - OWNER

+ information
+ security
+ control

- Manage your business remotely, without having to travel.
- Enjoy an interface that simplifies the management of your company.
- Access reports on production, cycles and consumption.
- Ensure washing and drying processes.
- Guarantee hygiene, disinfection and the quality of each cycle.

TECHNICAL SUPPORT

+ efficiency
+ support
+ information

- Improved service offered to customers.
- Improved processes, more efficient and less costly, avoiding unnecessary travel.
- View data on cycles performed with the new telemetry.
- Remotely update the software to keep machines up to date without having to travel.

CHEMICAL TECHNICIANS

+ information
+ management
+ ease of use

- Remotely manage and create washing and drying programmes.
- Ensure efficient processes and guarantee the hygiene and quality of each load.
- Access new, detailed telemetry data for all programmes run.
- Thanks to data from the new pulse concentrator, chemical technicians can adjust and optimise the dosage of chemical products.
- Establish connections with dosing systems.

FagorKonnnect:

main functionalities

From the main menu of the web platform, you will have access to various functions that will allow you to completely manage your laundry, whether from your mobile phone, tablet or computer.

DASHBOARD

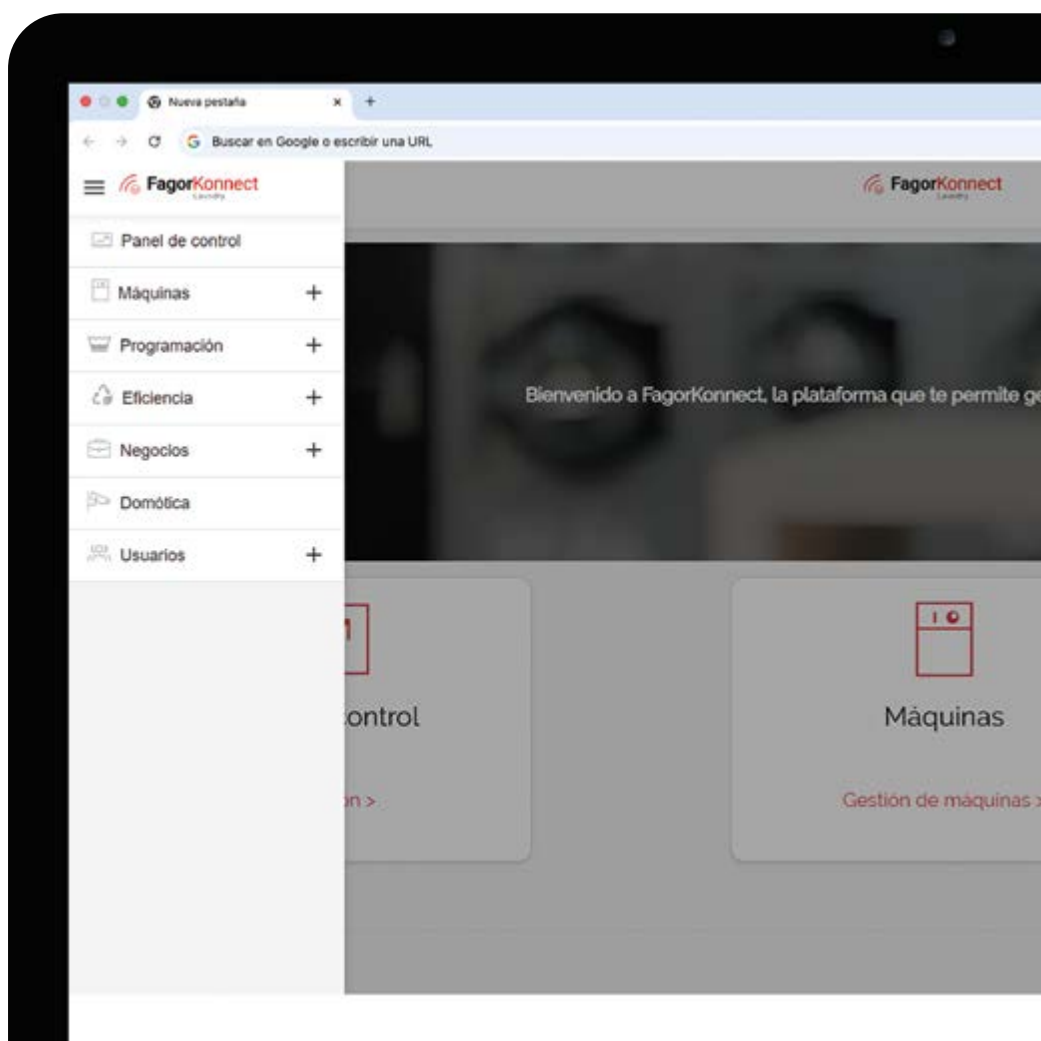

MACHINES

PROGRAMMING

EFFICIENCY

BUSINESSES

USERS

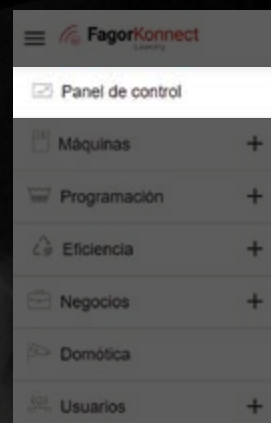

DASHBOARD

Manage your business

Customised graphs to track your business: machine status, cycles performed, occupancy, errors, etc.

- View machine status, geographical distribution, cycles performed, evolution over time, occupancy, programmes run, and number of errors, among other things.
- Filter and customise information by date, machine type, status or other criteria.
- Group graphs to customise your dynamic control panel.
- Download graph information in XLSX or CSV format.

Dynamic panel

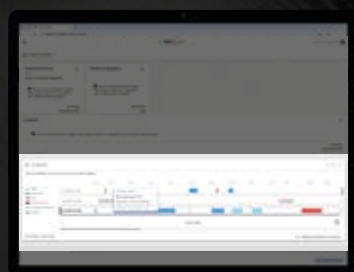

The new dashboard allows you to organise graphs into customised groups.

- Create labels to group graphs according to your criteria (efficiency, productivity, hygiene, etc.).
- Save and view customised groups of graphs for specific analyses.

Improved occupancy graph

Allows you to monitor machine usage time, showing details for each day within a selected range.

Display graphs on a television screen

You can choose any graph to send and display on a screen as an information panel.

MACHINES

Remote management and configuration

Management: telemetry, statistics, remote access, error notifications, etc.

Configuration: programmes, phases, prices, washer and dryer settings, etc.

- Organise and manage equipment remotely by grouping it according to your criteria.
- Filter your machines with advanced options such as type, status, software version or keywords.
- Take advantage of new telemetry to obtain key data and optimise your operation.

Remote desktop

Access your machines from anywhere, as if you were right in front of them. Facilitates daily management for the owner and enables efficient remote assistance from technical support.

New telemetry

The new telemetry provides you with more data and displays it in dynamic, highly visual and customisable graphs, allowing you to:

- Select data by date ranges.
- Use the zoom to view data in greater detail.
- Identify incidents in cycles.
- Export the telemetry you are viewing and import data from other machines.

Organise your equipment

Use colour labels to easily sort, filter and view all machines that share the same label.

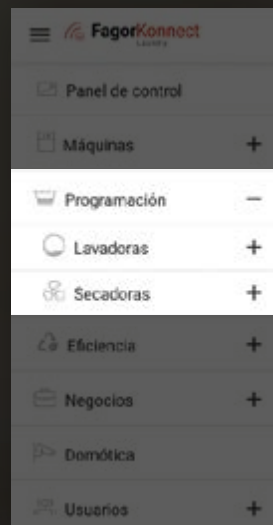

PROGRAMMING

Control the machines

This menu offers you a wide range of possibilities to configure and program your machines remotely (create programmes, phases, group programmes, filter), view telemetry, and much more.

- Create, modify or delete programmes according to your needs.
- Manage remote settings: update programmes from **FagorKconnect** or via USB.
- Export key data to load onto machines via USB.

Organise and group your programmes

Create categories for a more structured and personalised management according to your operations.

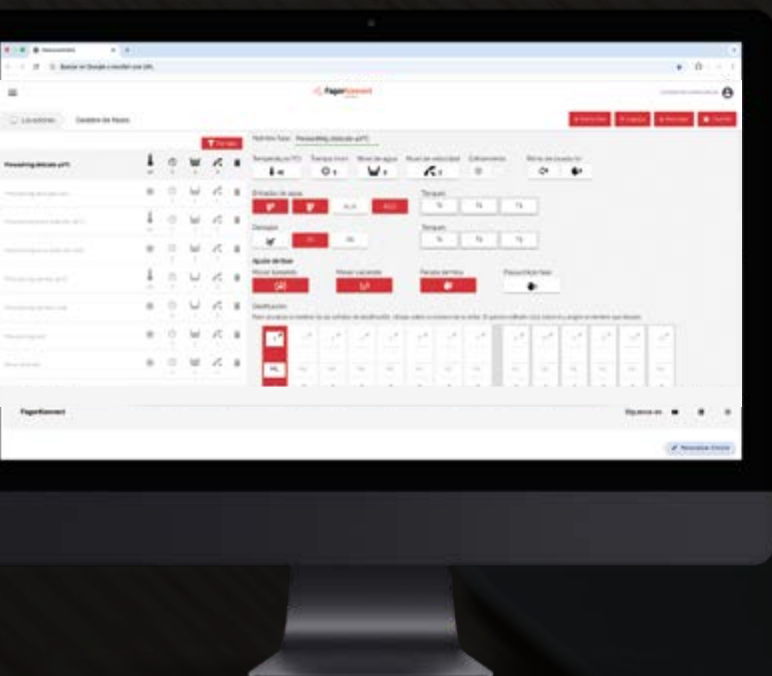

Advanced automation

Schedule breaks, adjust cooling controls and use smart dosing to optimise processes and ensure consistent results.

Complete control over machines and their settings

Adjust parameters such as temperature, water level, speed, dosage and more, on both washers and dryers, to optimise efficiency and results.

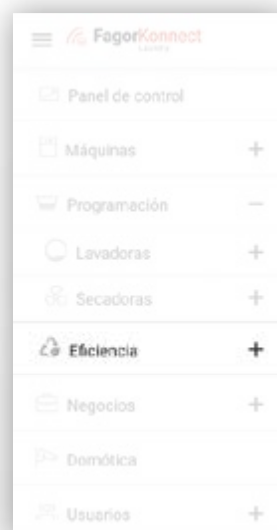

EFFICIENCY

Sustainable laundry

Monitor and manage the consumption of your laundry to make better use of resources and significantly reduce costs.

- Monitor and control water, electricity and gas consumption instantly with data from the LEMS by Onnera system and **IoT technology.****
- Minimise operating costs by detecting inefficiencies and improving processes to save energy and resources.

Useful and accurate reports

Generate reports and analyse consumption by machine, area or period to detect patterns and improve efficiency.

Flexible and versatile

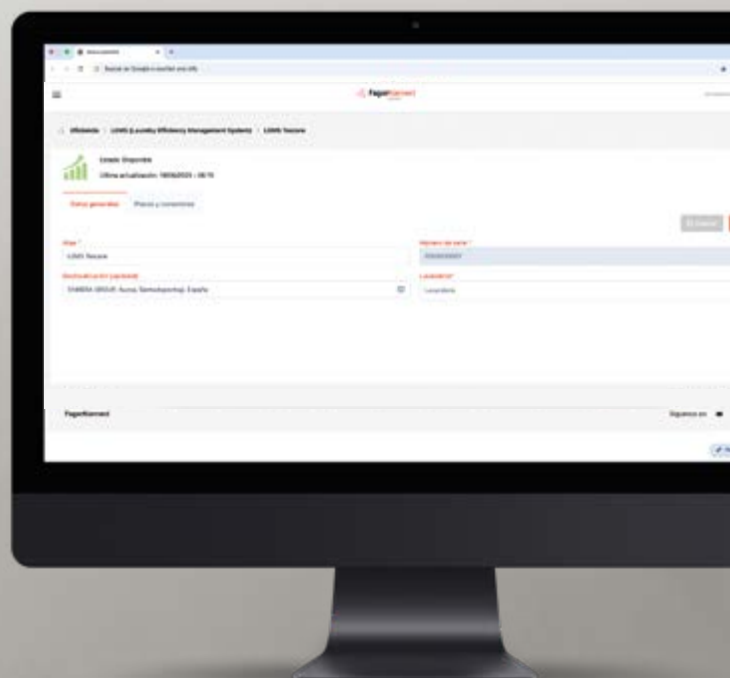

The LEMS system by Onnera allows you to obtain consumption data from machines with Touch Plus Control TP2, M control or other equipment.**

Customised configuration

Link each meter to a specific machine and set the supply type, pulse value and unit of measurement for accurate control.

****These data may not be 100% reliable in certain cases due to technical reasons beyond ONNERA GROUP's control. Therefore, ONNERA GROUP cannot be held responsible for any claims or economic losses arising from their use. They are provided solely for informational and management purposes not for legal use.**

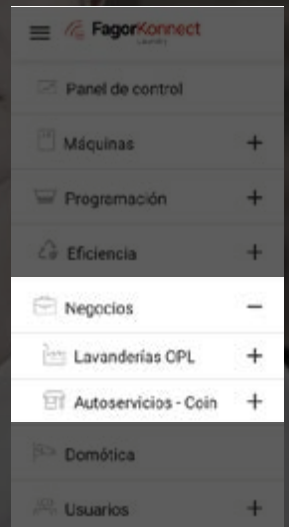

BUSINESSES

OPL Laundry

The owner can configure and manage everything related to their laundries: production, consumption, earnings, generate reports, etc.

- Create and manage your laundries, grouping them by geolocation and customised labels to facilitate their management.
- Associate machines with each laundry: link machines to each laundry to facilitate their management.

**Manage your businesses**

Create a well-defined structure by incorporating laundries with specific locations, labelling them with distinctive colours and grouping them according to criteria such as region, type of business, or size.

**Immediate access to advanced controls**

Use telemetry and statistics provided by **IoT/ FagorConnect** to make informed decisions and optimise the operational performance of your businesses.

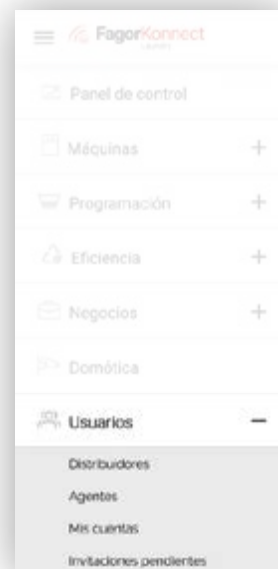

USERS

Management of users

Manage and control access to the **FagorKonnnect** platform to ensure an efficient and secure management of your laundry.

By registering on the **FagorKonnnect** platform, you will be able to:

- Provide access to members of your organisation.
- Grant authorisations to collaborators, technical support, agents, etc.
- Decide who has access and manage permissions for each user.
- Review pending invitations. If we have sent any, you can see how much time is left and resend them if you wish.

Distributors

Set what information your distributors can see, allowing them to access only the data necessary for their work.

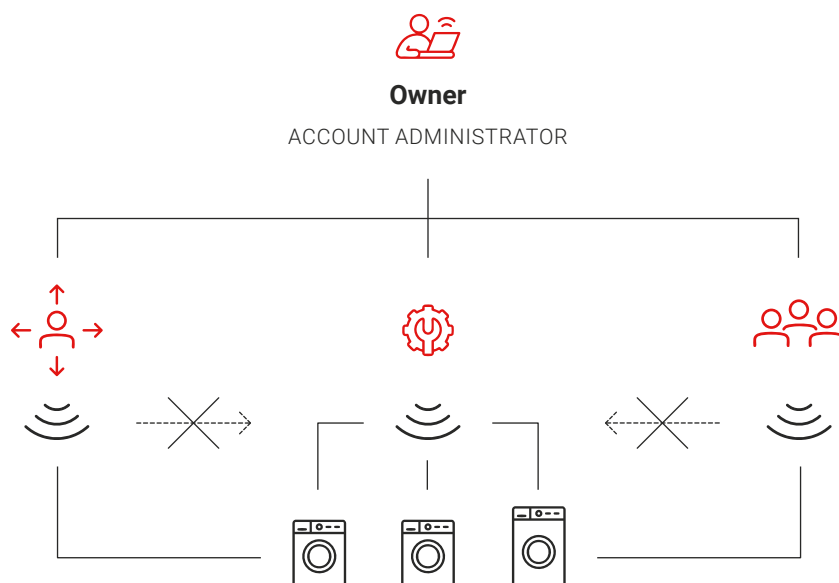

External agents

Allow external agents, such as product distributors, technicians and other collaborators, to remotely access your machines.

Secondary profiles

Generate customised accounts for users of your laundry.

ONNERA GROUP
