

Fagor Industrial's latest novelties in laundry made their presence known at the Texcare fair in Frankfurt from 11th to 15th June

Fagor Industrial has been present at the International Texcare Fair in Frankfurt (Germany) from 11th to 15th June, one of the main events for the laundry and dry cleaning sector on the international stage.

The Spanish company shared a 365 meter squared stand with two other brands from the ONNERA group, in Hall 8 of the Messe fair venue in the German city. Here, Fagor Industrial showed off the latest novelties that it has launched in industrial laundry. Products designed with the very latest technology and highest quality to provide the highest performance and productivity, whilst taking into account values such as energy efficiency, respect for the environment and timesaving. This is the case of the washing machine models that have been exhibited, including the high spin (LA 35 TP E and LA 14 TP E), fast spin (LR 18 TP E line) and self-service (LR 18 TP E and LN 14 TPE) ranges.

Fagor Industrial's new catalogue includes washing machines incorporating the new Touch Plus Control programmer, a revolution in the sector which brings ease of use and new possibilities to the user. They are also equipped with the latest advances in Wet Cleaning and efficient saving systems such as Auto Weight, which automatically adjusts water, detergent and energy consumptions according to the load of clothing introduced.

The new dryer models, which are the most efficient on the market, incorporate a wide variety of properties and accessories aimed at making better use of energy and at reducing drying time. These range from the intelligent drying system with its humidity sensor (iDry), through to the double glazed door, heat insulation, total airflow system (Total Flow) and the intelligent air recirculation system (Green Flow System), a revolutionary initiative which reintroduces the hot air from the exhaust back into the drum. Among other models, visitors to the International Texcare Fair were able to witness the Green Evolution Plus range (SR 16 HE, SR 35 PLUS G and SR 16 E) and (SR-2-16 MP2A G INOX). The efficiency of these designs allows for energy savings of up to 60%.

Every four years the leading companies of the market gather at the International Texcare Fair in Frankfurt, which brings together almost 300 exhibitors and more than 16 000 visitors in an exhibition area of 30 700 meters squared.
